COO TASK MANAGEMENT TOOL

Description

The agent automatises the task management.
Usage: The worker interact with a bot as his/her assistant.
Through audio or text input, the agent set a new task, monitor it and manage it.
Features: create new task, edit it (delete, set as done, move date, modify), monitor deadlines, notify the worker.

Architecture / List of agents

Director Agent
Monitors events, call subagents, monitors general activity (keeps track of events)

Subagent 1: Notifier (SimpleX Bot)

Responsible for Notification service to users and from user.
To User: notification about new task, modification of task, reminder eccetera
From User: the user input a message (audio or text) in the chat bot Task Manager on SimpleX which triggers the Transcriptor Subagent.

Subagent 2: Transcriptor
Takes an audio or text file.
If audio it transcribe it (with Whisper engine) to text.
Transcribed text gets saved into file (on Infomaniak kdrive...define directory and file type).

New file/modification of file (depends if transcript of record is saved in one file or multiple files in one folder) triggers Subagent Task definer.

Subagent 3: Task definer
It searches for evidence of tasks setting for a certain team member or group of team members through from context or keywords.
It fills the fields of an object Task which mirrors the task structure in Trello.
Once new task is defined Subagent Dispatcher is triggered to communicate to subagent Trello Manager.

Subagent 4: Dispatcher
This subagent is delivering messages to/from subagents and to notification agent which notifies users.

Subagent 5: Trello Manager
This agent is connected to Trello and cooperate with dispatcher, it monitors inputs from outside to Trello, manage Trello platform and create notifications in output (new task, modification of task, delete task, done task, reminder of task) to subagent dispatcher.
The agent set the new task for the worker

List of event Triggers

Trigger1: new recording
Trigger 2: new transcription in folder
Trigger 3: identification of tasks complete
Trigger 4: in events on Trello (commands coming from outside)
Trigger 5: out events on Trello (notification coming from Trello as a reminder)

Tech List:

SimpleX

Whisper Engine
Trello API
